Product Summary

Dimensions: (selected length) x 22"D x 18"H

Weight: 110 lbs.(4')

Product Description

This bench sports 3" steel pipe legs instead of cast iron style for a lighter piece of furniture with a modern, urban style that's ideal for civic or corporate environments.

This bench is covered in a copolymer-based thermoplastic powder coating. Thermoplastic is environmentally safe. The coating will not fade, crack, peel, warp, or discolor for the life of the product. Thermoplastic has the best adhesion rate of any other coating process. This keeps the metal base free of any corrosion possibilities.

The thermoplastic is applied at a thickness of 25-30 mils. This allows maximum protection with the best possible surface. Cuts are repaired by heating the affected area with an industrial heat gun. The thermoplastic will melt and rebind itself.

Product Info: - 11 gauge steel seat is 22"W - C3" 11 gauge tubular steel legs - Thermoplastic coated finish - Pre-drilled mounting holes
